### Discussion

Identifiers issued by a registration authority (Mycobank) were cited for the three new species of *Lecidella* and the one new combination in that genus published by Kantvilas and Elix (2013), as required for valid publication under Art. 42.1 of the *International Code of Nomenclature for algae, fungi and plants* (McNeill et al. 2012). However, for the three new species in particular, the identifiers as issued by Mycobank were incorrectly associated by the authors with the respective species names. In dealing with this situation, one option is to treat the mis-citation of the identifiers as a correctable error, dealt with through a corrigendum. An alternative option is that names should be regarded as invalid under Art. 42.1, because the actual identifier for the name, as issued, was not cited. There is no advice in the *Code* as to the appropriate course of action and there are various opinions within the Nomenclature Committee for Fungi on this matter, including support for both of these two options. Therefore, we opt to validate the three names below, by citation of the correct identifiers and a direct reference to the previously published descriptions. If re-validation turns out not to be necessary, this publication can be treated as a simple corrigendum.

### Abstract

The publication of three species of *Lecidella* described in *Muelleria* 31 (2013) – *Lecidella destituta* Kantvilas & Elix, *L. flavovirens* Kantvilas & Elix and *L. montana* Kantvilas & Elix – is validated by the citation of correct Mycobank identifiers and references to the previously published descriptions.

**Key words:** *destituta*, *flavovirens*, *montana*, publication, lichenised Ascomycetes

***Lecidella destituta* Kantvilas & Elix, sp. nov.**

Mycobank No.: MB803598

**Description:** See Kantvilas and Elix (2013, p. 32).

**Type:** NEW SOUTH WALES. Gillenbah State Forest, 8 km S of Narrandera, 34°47'51"S 146°30'00"E, 170 m alt., on *Callitris* in mallee scrub, 16 April 2009, J.A. Elix 39928 (holotype: HO; isotype: CANB).

***Lecidella flavovirens* Kantvilas & Elix, sp. nov.**

Mycobank No.: MB803599

**Description:** See Kantvilas and Elix (2013, p. 37).

**Type:** TASMANIA. Ship Stern Bluff, 43°12'S 147°45'E, 80 m alt., on *Banksia marginata* in coastal scrub, 2 May 2011, G. Kantvilas 185/11 (HO: holotype; BM, CANB: isotypes).

***Lecidella montana* Kantvilas & Elix, sp. nov.**

Mycobank No.: MB803600

**Description:** See Kantvilas and Elix (2013, p. 40).

**Type:** TASMANIA. Falling Mountain, 41°55'S 146°06'E, 1480 m alt., on twigs of *Diselma archeri* in alpine heathland, 11 March 2011, G. Kantvilas 137/11 (holotype: HO).
